Problem statement
Measure the level of ambient noise during typical college nightlife activities and evaluate their impact on the human ear.

Locations
Library     Marino     Howl at the Moon     Our House     AfterHours

Conclusions
- Our House, Howl at the Moon, and AfterHours are loud environments which can cause ear damage after 6-15 minutes.
- Most bars or concerts that we attend will be above the safe sound level.
- In addition to being a nexus of intellectual stimulation the library is the quietest nightlife activity.
- Recommendation: Wear ear protection at concerts and bars.
